

MFP Supported List

Dispatcher Phoenix's advanced capture capabilities go well beyond traditional scan and capture solutions by providing multiple methods for collecting files from an MFP:

Push scanning:

- Files are sent from the MFP at time of scan
- Native Interface provides MFP standard looking interface for scanning
- Graphical Interface on MFP panel provides a rich, colorful interface for scanning

Pull scanning:

- Files can be retrieved from an MFP User Box
- Supports password-protected User Boxes for added security
- Scheduler allows for files to be pulled from MFP at a scheduled time (e.g., after 1:00 AM when network bandwidth is available)
