

Giving Shape to Ideas

Speed Your Dispatcher Phoenix Workflows by Connecting to Workshare.

connect

In the effort to maximize productivity, organizations and companies across all industries face a serious challenge: the need to find simple, secure ways to share and store their documents.

One solution stands out: Workshare, a leading provider of enterprise file sharing and collaboration applications, which offers a secure alternative to email and FTP by allowing employees to create, share, and manage high-value content anywhere, on any device.

With Konica Minolta's Workshare Connector, offered as part of the Dispatcher® Phoenix document workflow application solution, your files can be automatically distributed to Workshare – speeding access to collaborative content and increasing the productivity of your document workflow.

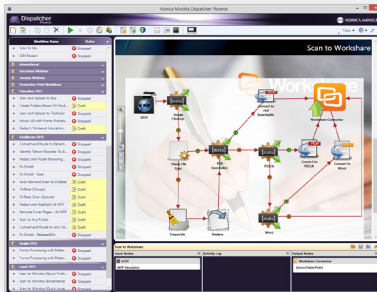

Automation.

Workshare Connector: distributing content with speed and security. Moving content to the proper destination can be easier than ever. Konica Minolta's Workshare Connector lets you distribute your files to Workshare automatically or with a few quick touches at the MFP. Offered as a Dispatcher Phoenix optional node, the Workshare Connector provides our customers with the tools they need to process and manage their important business documents. You can convert your scanned images to Microsoft Word or Searchable PDF, rename your files at the MFP, apply Bates stamp or watermarks and much more – then store your processed documents in Workshare for quick and simple access.

Automatic Distribution.

Distribute files in a single simple step. Using Dispatcher Phoenix's graphical and intuitive Workflow Builder Tool, you can easily create workflows that distribute files to Workshare. With this hands-free solution, your files can be collected, processed, and then distributed to an existing or new folder in Workshare – all automatically and in a single step.

Access from the MFP.

Your Workshare Connector also allows you to scan paper-based documents into Workshare directly from the MFP. With Dispatcher Phoenix's visually enhanced display at the MFP panel, it's easy to log into your Workshare account, choose a folder to scan to, and then upload your scanned documents to Workshare. A Search field with type-ahead functionality helps you filter the list of folders that appear on the panel. You can also scan to a new folder you've created in Workshare without ever having to leave the MFP.

Advanced Features.

The Dispatcher Phoenix Workshare Connector accepts files from a variety of sources, including direct scans from MFPs, local or network folders, MFP User Boxes and more. Document processing tasks, including rename, file conversion, Bates stamp, redaction and many more can be performed before your files are stored in Workshare.

Solutions.

Dispatcher Phoenix: a family of automated document workflow solutions from Konica Minolta... versatile, scalable, and available in versions for general business as well as Legal, Education, Healthcare, Finance and Government markets.

- **Dispatcher Phoenix Foundations:** entry-level, cost-effective version with powerful scanning, routing and processing tools.
